Land Registration and Cadastre in Selected European Countries: Austria, Bulgaria, Croatia, Hungary, Netherlands

Land registration and cadastre are essential for the management, protection, and efficient use of land resources. They are fundamental to the functioning of modern societies, providing the legal framework for the recognition and protection of property rights, and facilitating the transfer of property through registration and cadastre.

In the context of the European Union, land registration and cadastre play a crucial role in ensuring the protection of property rights and in supporting the development of a modern, efficient, and sustainable economy. The EU has implemented various initiatives to support the harmonization of land registration and cadastre systems across member states, promoting transparency, efficiency, and the protection of property rights.

In Austria, Bulgaria, Croatia, Hungary, and the Netherlands, the land registration and cadastre systems are well-developed and provide robust frameworks for the management and protection of property rights. These systems are integral to the functioning of the real estate market, providing a basis for the efficient transfer of property and facilitating the provision of financial services.
